

## DECCAN INTERNATIONAL CELEBRATES ITS 10TH YEAR IN BUSINESS

**SAN DIEGO, CA, January 05, 2007** – 2006 proved to be yet another triumphant year for Deccan International with the company enjoying many reasons for celebration. Marking its 10<sup>th</sup> anniversary in business, Deccan moved to new headquarters in support of its growing team, successfully installed and tested applications for FDNY (Fire Department City of New York), and welcomed five major agencies to its client list – Kirkland Fire Department, Alameda County RECC, BIPIN SECOMM, Tucson Fire Department, and Washington D.C Fire.

Deccan President Latha Nagaraj summed it up best in saying, “We at Deccan pride ourselves on being a leader and a pioneer in the field of software applications for the public safety sector. We offer an unparalleled suite of applications successfully installed in 90 agencies throughout the U.S. and Canada.”

The company shares a distinctive camaraderie with its clientele, very much in display at its 10<sup>th</sup> Annual Users Group Conference held at San Diego’s Manchester Grand Hyatt Hotel. With considerable pride, Deccan exhibited its suite of software product to 100 plus attendees including Fire Chiefs, GIS Analysts, and Communication Center Managers. The three-day conference was extremely productive for all attendees who returned home not only with a better understanding of each application but with new friends and, for many, a California suntan!

Headliner news for the company in 2006 included its successful completion of Phase One for FDNY: the installation of CAD Analyst, ADAM, and BARB, a project requiring the utmost in dedicate and diligence from Deccan’s Project Managers. “We are constantly adding enthusiastic and dynamic individuals to our team. They fit right in and take on big projects like FDNY with great confidence,” states Raj Nagaraj, company Vice-President and Engineering Chief.

In another major development, Deccan signed an exclusive international re-sellers agreement with Intergraph Public Safety. “This relationship with Intergraph has taken little Deccan to a whole new level,” comments Latha Nagaraj. “We now have even bigger and brighter opportunities outside the U.S. and Canada.”

The spotlight also fell on LiveMUM, a truly unique offering from Deccan which gained considerable momentum during 2006, this according to Raj Nagaraj.

Deccan's innovative thinking and drive to tackle new challenges led the company to undertake with Intergraph a beta project in law enforcement. Working with the Royal Canadian Mounted Police (RCMP) as the beta site, Deccan concentrated on policing challenges with an application similar to LiveMUM.

"There are so many exciting projects to which we look forward in 2007," says Sai Khrisnamurthi who heads up the Project Management team. "Our morale is boosted by this continual sense of progress and accomplishment."

With an unyielding commitment to excellence in its products and services, Deccan International welcomes the challenges, the opportunities, and the fellowship 2007 will surely offer.

### **About Deccan International**

Deccan International, founded in 1995, is a leading San Diego based developer of public safety, CAD analysis software for strategic and tactical deployment planning that optimizes resources, move-ups and run cards. The Company's suite of software applications are practical, data-based tools that combine a unique blend of analytical rigor and industry experience to help Fire, EMS and Dispatcher operations become more efficient. Deccan's products offerings include CAD Analyst, Fire/EMS ADAM (Apparatus Deployment Analysis Module), LiveMUM (Live Move-Up Module), BARB (Box-area Automated Run card Builder) and DiVa (Dispatch Validator).

Deccan's consulting division delivers unbiased, reliable and proven results for clients seeking to reduce response times, identify staffing strengths and weaknesses, and defend against threatened budget cuts in their operations. Deccan's products perform superior performance analysis, budgetary defense and planning, consolidation and relocation strategies, real-time optimization of resources, disaster planning and enhanced interoperability, reduction of time and costs for maintaining pick lists through automation, and improve Communication Center operations with real-time move-up recommendations. The company's client base includes major metropolitan and small community Fire & EMS Departments throughout the U.S. and Canada.
