Does Your Comm Center Have Large, Wall-Mounted, Real-Time Coverage Maps Of Your Current Coverage?

Deccan's LiveMUM™ real-time coverage maps support the growing number of Comm Centers that are demanding more from their large wall-mounted real-time map displays. Instead of merely displaying real-time unit locations and statuses, they want the maps to be truly useful by showing the implications of these statuses in the form of real-time color coded coverage maps. LiveMUM does just this.

LiveMUM's Status of coverage maps indicate and alert the need for a move-up. As soon as a hole in coverage is detected, LiveMUM instantly makes available intelligent move-up recommendations to the dispatcher. The custom built recommendations are based on live data and information the dispatcher can enter as well as the unique and standard business rules of each Comm Center.

LiveMUM is compatible with any CAD.

View a demo at booth 643 or see live streaming demos at www.deccanintl.com.

See the LiveMUM map (below) showing dispatchers in real-time a **Coverage Map** for Engine and Ladder. **Green**, **Yellow**, and **Brown** areas show full coverage. **Red** areas indicate a hole in coverage.
