

5 WAYS BARB CAN HELP WITH SPECIAL EVENTS

BARB automates the building of static run-cards for a CAD system. To learn more about how Deccan's BARB can help your department with upcoming events like; Street Fairs, Parades, Protests, Marathons, or other pre-planned events, contact sales@deccanintl.com

Mutual Aid

BARB can include mutual aid agreements at both the regional and statewide level and logically select units for the scene with the shortest response time when local resources become depleted.

Deployment Plan Changes

Create new deployment plans using “scenarios” to create pre-defined modifications to your Run Cards input automatically into your CAD system.

Utilize Alternate Resource Types

This department chose to station a Medic Cart in the park near the Annual Food Truck Fest, as regular park access is now closed to normal vehicle traffic and pedestrian foot traffic has increased. BARB will allow you to automatically incorporate alternate resource types like these into your Run Cards.

Impedance Data

If your department provides an alternate street network with speed levels adjusted to reflect new traffic levels, for example more congested traffic due to a nearby parade, BARB can easily add that street network and regenerate run orders.

Street Network Editing

BARB will allow your department to temporarily edit your street network to ensure routing accuracy during a special event that has now created road closures in your city.
